Lacre Evidence Report

generated 2026-10-27T16:28:10.868Z

VERIFIED — AUTHORITY NOT VERIFIED

VERIFIED AND ANCHORED THROUGH SEQ 2. All 3 receipts are internally consistent and correctly signed, and 1 external timestamp(s) prove the history up to seq 2 existed at 2026-10-27T16:28:05.000Z. The operator could not have altered anything at or before that position without breaking the timestamp. NOTE: the timestamp authority was not in your trust list -- confirm you trust it before relying on this.

Scope

Chain `e9642d14-d9ee-4b2c-9f76-11f2e07068f8`
Receipts 3
Positions `seq 0 through 2`
Time span `2026-10-27T16:28:00.135Z to 2026-10-27T16:28:01.000Z`
Agents 1
Irreversible actions 3

External attestations

Position `seq 2`
Status `EVIDENCE — constrains the operator`
Attested time `2026-10-27T16:28:05.000Z`
Authority `C=US, O=DigiCert\, Inc., CN=DigiCert SHA256 RSA4096 Timestamp Responder 2026 1`
Trust anchor `C=US, O=DigiCert Inc, OU=www.digicert.com, CN=DigiCert Trusted Root G4`
fingerprint `33846b545a49c9be4903c60e01713c1bd4e4ef31ea65cd95d69e62794f30b941`
In your trust list `NO — confirm independently`
verified: 'C=US, O=DigiCert\, Inc., CN=DigiCert SHA256 RSA4096 Timestamp Responder 2026 1' attests this chain reached seq 2 at 2026-10-27T16:28:05.000Z (authority NOT in your trust list -- confirm you trust it)

Activity by action

refund.issue 3

How to verify this yourself

This PDF is a summary, not the evidence. It has no cryptographic value and anyone can edit it. The evidence is the accompanying JSON bundle. To check it independently, without trusting the operator of this system and without a network connection:

```
npx @lacre/verifier bundle.json --trust <authority-root.pem>
```

The verifier is MIT licensed, makes no network connections, and shares no code with the software that produced this bundle. It re-derives every hash and re-checks every signature from the bundle contents alone.

What this does and does not establish

• It establishes that the receipts shown are internally consistent and were signed by the registered agent keys.
• It does NOT yet establish that the history is unaltered. A timestamp token is present and cryptographically sound, but the authority that signed it is not in your trust list, so nothing rules out that the signer was chosen by whoever produced this bundle. Confirm the fingerprint above against the authority directly, then re-run with --trust-fingerprint.
• It does NOT make anyone compliant with any regulation. Lacre produces tamper-evident records that support logging obligations. This is not legal advice.
